

Protect your asphalt.

The following properties make Hawk-Seal-E a truly unique asphalt sealer.

Penetrates. Becomes part of the asphalt.
Does not merely cover the surface.
Hawk-Seal is put down in three applications.
All three applications can be made the same day,
or 1-day, 1-week, 1-month apart.

Here, a first application has penetrated.

(30 minutes after application to a residential street.)

Can be applied with minimal traffic interruption.
Expensive lane closures generally not necessary.
No sand or other aggregate is used before,
during or after treatment.
The treated surface is not slick during or
after treatment.
There is no tracking after 30-minutes in direct sun.

After treatment, surfaces look and wear like a new overlay.
