

✓ Is site specific, not a 1-step cover-up.
Asphalt will absorb as much Hawk-Seal as needed.

Three applications were made to this high traffic street.
The side of the street, where cars park and traffic is minimal, is less compacted and needs more product.

Hawk-Seal will locate areas of low compaction and seal them.

✓ Tightens the binder and reduces raveling.

Photos show 15 year old surface before treatment and 6 years after treatment.
Loose aggregate was removed prior to treatment.
Aggregate breakout was significantly reduced.

✓ Waterproofs.
Untreated surface at right, 3-days after a rain.
Far right, 1½ years after treatment,
1-day after a heavy rain.

After treatment, water evaporates instead of penetrates.

✓ Hawk-Seal is worker friendly and environmentally safe. Here it is being applied to walking trails along the environmentally sensitive Missouri River. Hawk-Seal has no VOC's.

"I am convinced that Hawk-Seal is the best pavement sealer I have seen during my 30 years with the Federal Highway Administration as Research Engineer and Pavement Specialist and during my 8 years as a city engineer."

--- author of the FHWA's Hot-Mix Bituminous Paving Manual

Nothing on the market has the physical or chemical mechanics of Hawk-Seal.
Hawk-Seal will extend the life of asphalt and will reduce maintenance costs.
Hawk-Seal is a true, penetrating maintenance treatment.
Hawk-Seal is economical and easy to apply.
